

Recommended action

Develop a security concept for your know-how:

- ▶ Designate a person responsible in your company
- ▶ Identify your sensitive know-how
- ▶ Analyse who has access to such know-how inside and outside your company
- ▶ Establish organisational, technical and personnel measures to be taken to protect sensitive information
- ▶ Constantly evaluate your know-how security concept

Do not hesitate to contact us and make an appointment for confidential awareness talks.

Know-how security

There is existential know-how relevant for competition in every part of a company, and it is an asset worth protecting regardless of workforce size.

This know-how is not only targeted by competing companies, but also by foreign intelligence services.

Innovative companies of small or medium size should be especially aware of these facts.

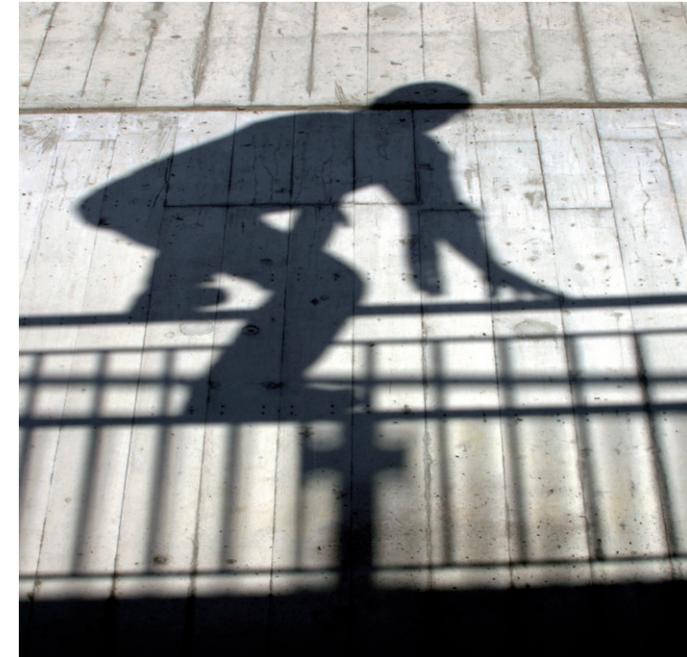

Cycle for know-how security

Risk scenarios

- A company entrusts a research institute with its product development. The guest scientist working there steals product information, placing the product on the market as his/her own idea
- The clerk of a German patent attorney's office provides a foreign intelligence service with confidential documents
- A foreign joint venture partner deliberately exploits the partner company's know-how for setting up his own enterprise with an identical range of products
- A car manufacturer transfers technical data of a prototype to a software company with an insufficient security structure. Cleaning staff members steal the associated design plans
- A laptop is stolen when a biotechnological laboratory is burgled. The perpetrator's exclusive interest is the current development data stored on the laptop
- A cleaning staff member takes advantage of her access rights, secretly connecting a keylogger to the company board's computer.

Your company's risk of unintentionally losing know-how is continuously increasing. Attack methods are becoming more diverse. This is why your safety measures should be one step ahead.
